## [Explanation]

The subject matter of claims 1, 4, 7, 10-15, 18 and 21 does not appear to be novel or to involve an inventive step based on the descriptions of documents 1-7. Using an electrode active substance, a conductive aid and a binder to first granules, and then dispersing and/or dissolving the formed granules and using them for electrode formation is clearly described in documents 1 and 2, and having an active substance containing layer containing various predetermined ingredients is also described in documents 1-7.

The subject matter of claims 2, 5, 6, 8-11 and 16 does not appear to involve an inventive step based on the descriptions of documents 1-7. Document 3 describes a method for adding a conductive polymer material to the member of a layer containing an electrode active substance.

The novelty and inventive step of claims 3, 17, 19 and 20 cannot be refuted based on the aforesaid documents. Documents 1-7 do not describe or suggest that when a conductive polymer material is added, a precursor monomer is added and treated, nor do they describe or suggest the effect described in the specification which is achieved by satisfying such specified matters.
